

# ERA, GGT Tariff Model, December 2015 [Draft Decision] (Covered Assets Only)

## Information

### Prior to using this model

Solver must be both installed using Excel Add-ins and enabled in the VBA window > Tools > References > Check Solver

### Cost Allocation

Cost Allocation switch is located in 'Main' worksheet to switch between joint & covered asset costs and covered asset costs only

### General

All values in model must be displayed in non-negative values with the exception of *adjustments, imputation credits and tax losses*.

### Assets

Current Cost Accounting deems straight-line depreciation on all capex accounts prior to 1/01/2015 to be in 31/12/2014 dollars thereafter. No deflation or inflation is applied within the Asset Base.

### Capex

Under Current Cost Accounting all capex occurring after 31/12/2014 is deflated to 31/12/2014 dollars.

Capex accounts exist only to calculate capex depreciation - the year level capex opening asset values are not used for anything other than capex depreciation calculation while total capex opening asset values exist for a cross checking results of capex depreciation calculations against other financial models

### Worksheets

Worksheet	Description
Main	Summary of outputs, target outputs and settings for Solver to compute the X-Factor and tariffs.
WACC	Contains the relevant parameters related to computing the WACC
Inputs	Contains general inputs of assumptions, capital expenditures, operating expenditures, UAFG expense, approved depreciations
CoS	Computations of total revenue building block (cost of service), inflationary gain and Credit Foncier Check
Load	Contains inputs of gas volumes, distances, reserved capacity and other relevant information required to compute the reference tariffs
Revenue	Contains relevant load parameters, tariffs and revenue
Tax	Contains calculation of tax and imputation credits
Assets	Contains regulatory asset base. Computations prior to 31-December-2014 are nominal and thereafter are in Real 31-December-2014 \$m
Tax Assets	Contains tax asset base modelled from inception in 1994 based on assumed tax asset lives
